About

This document provides an overview of available settings for the *Divi-Modules – Hide & Show* module.

It discusses only those settings which are unique to this module and does not provide any information on settings which are common to most Divi modules.

For more information on common Divi module settings, please consult Elegant Themes [online documentation](#).

Further more, this document provides only limited information on installing and activating the module. It assumes the reader is already familiar with these concepts and has some prior experience with both WordPress and the Divi Builder.

Requirements

WordPress: Version 4.5 (or higher)

PHP: Version 5.6 (or higher)

MySQL: Version 5.0 (or higher)

Important: Requires the Divi Theme, Extra Theme, or Divi Builder Plugin to be installed and activated.

Divi-Modules plugins are created and tested using the latest Divi Theme and Builder versions. Backwards compatibility is not guaranteed, however, plugins should function normally with at least the following versions:

Divi Theme: Version 3.1 (or higher)

Extra Theme: Version 2.1 (or higher)

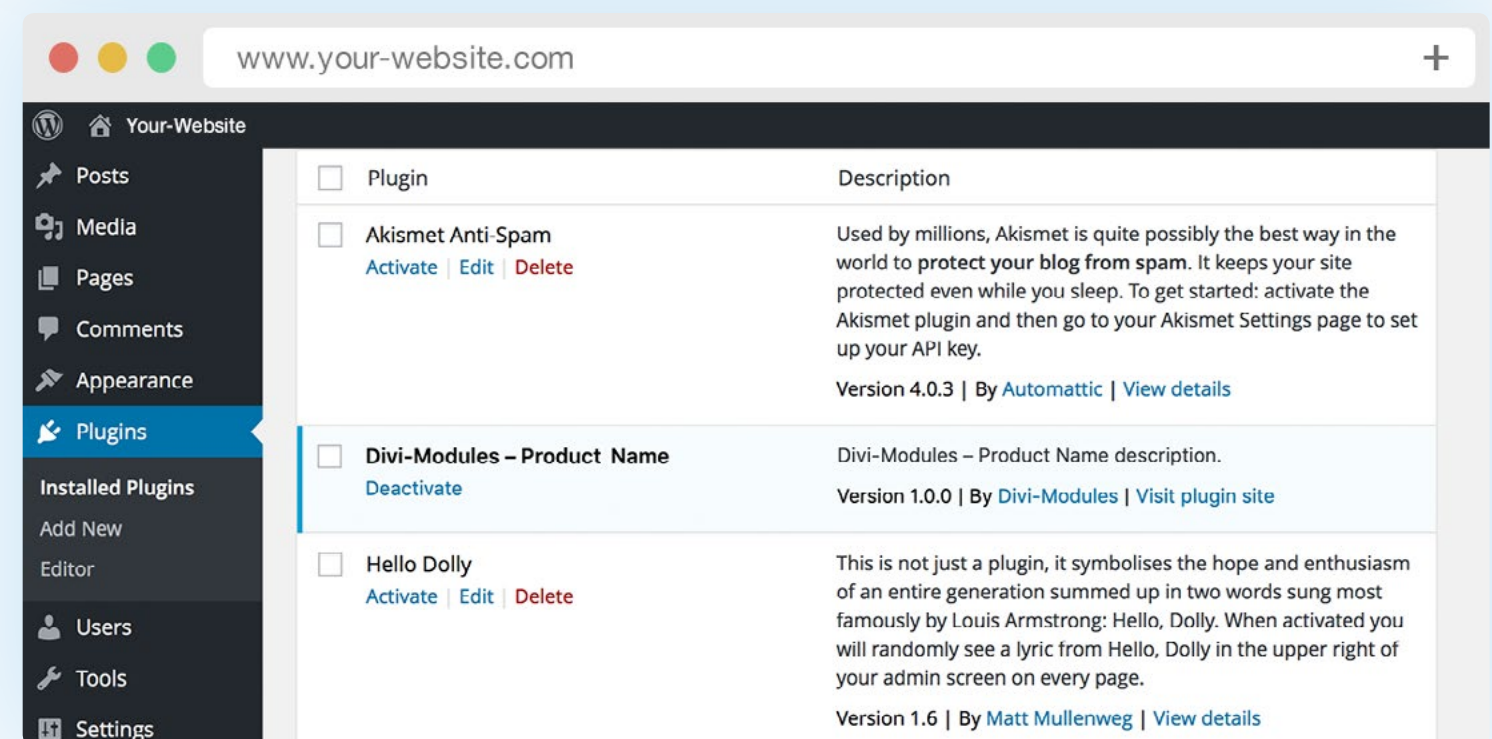

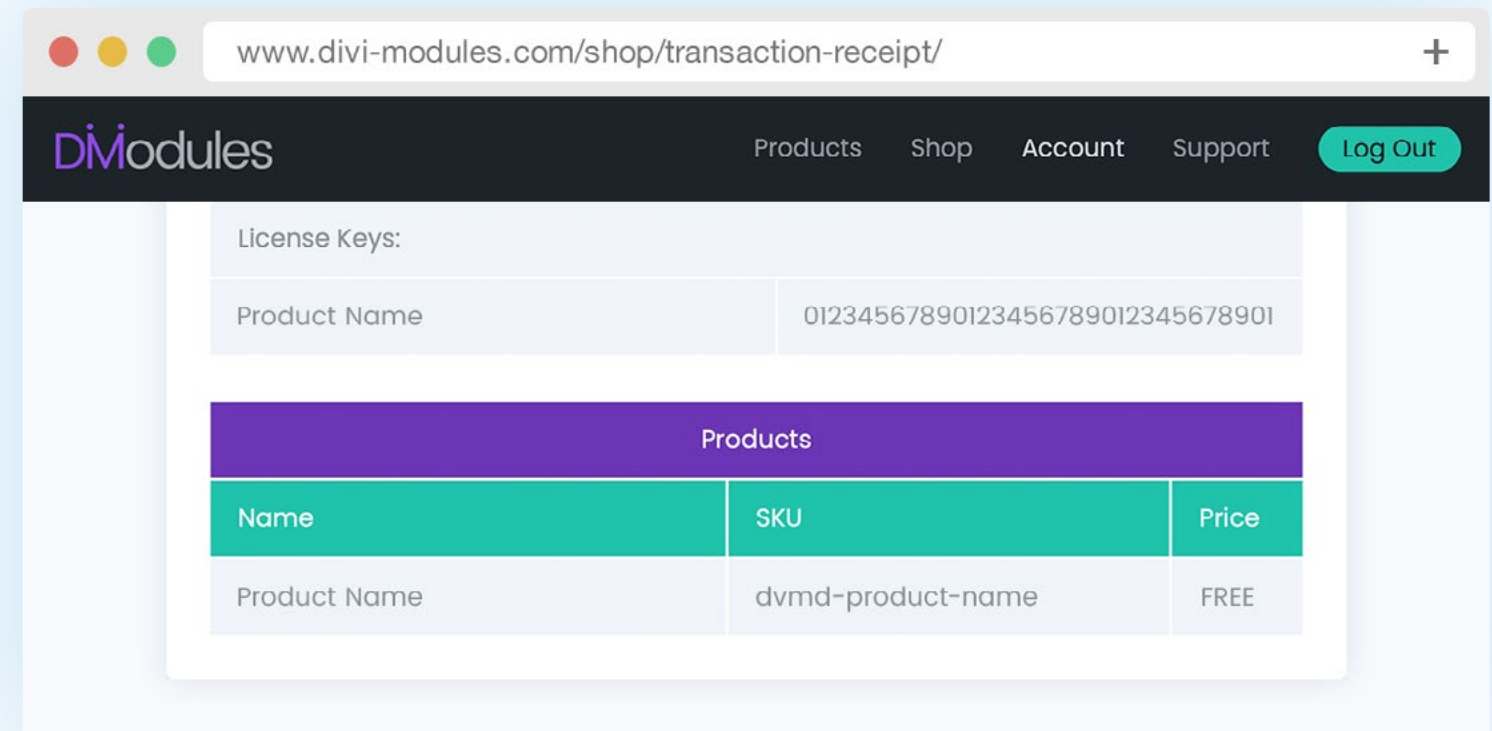

Divi Builder: Version 2.1 (or higher)

Installation

After completing your *DiModules* purchase, you will receive a confirmation email providing you with your *Download Link* and *Software License Key*. This information can also be found in your *DiModules Account* [Purchases](#) and [Downloads](#) pages.

After downloading your *DiModules* purchase, upload it to your website's *WordPress Dashboard* and click *Activate*. More detailed instructions on [Installing WordPress Plugins](#) can be found online.

If your *DiModules* product was purchased from the *Elegant Themes Divi Marketplace*, your product license is with *Elegant Themes*, not *DiModules*. For all product licensing, updates and support, see your [Divi Marketplace Customer Dashboard](#).

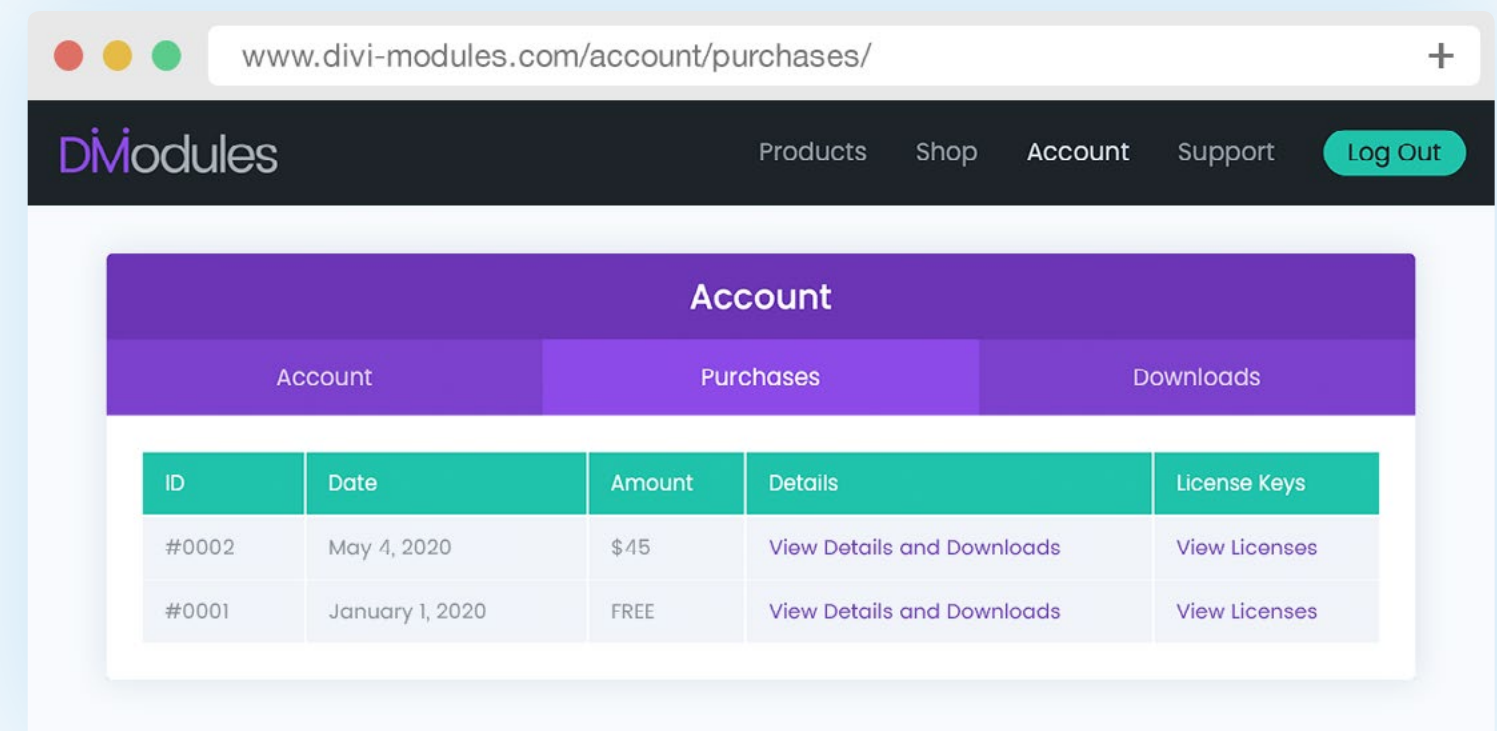

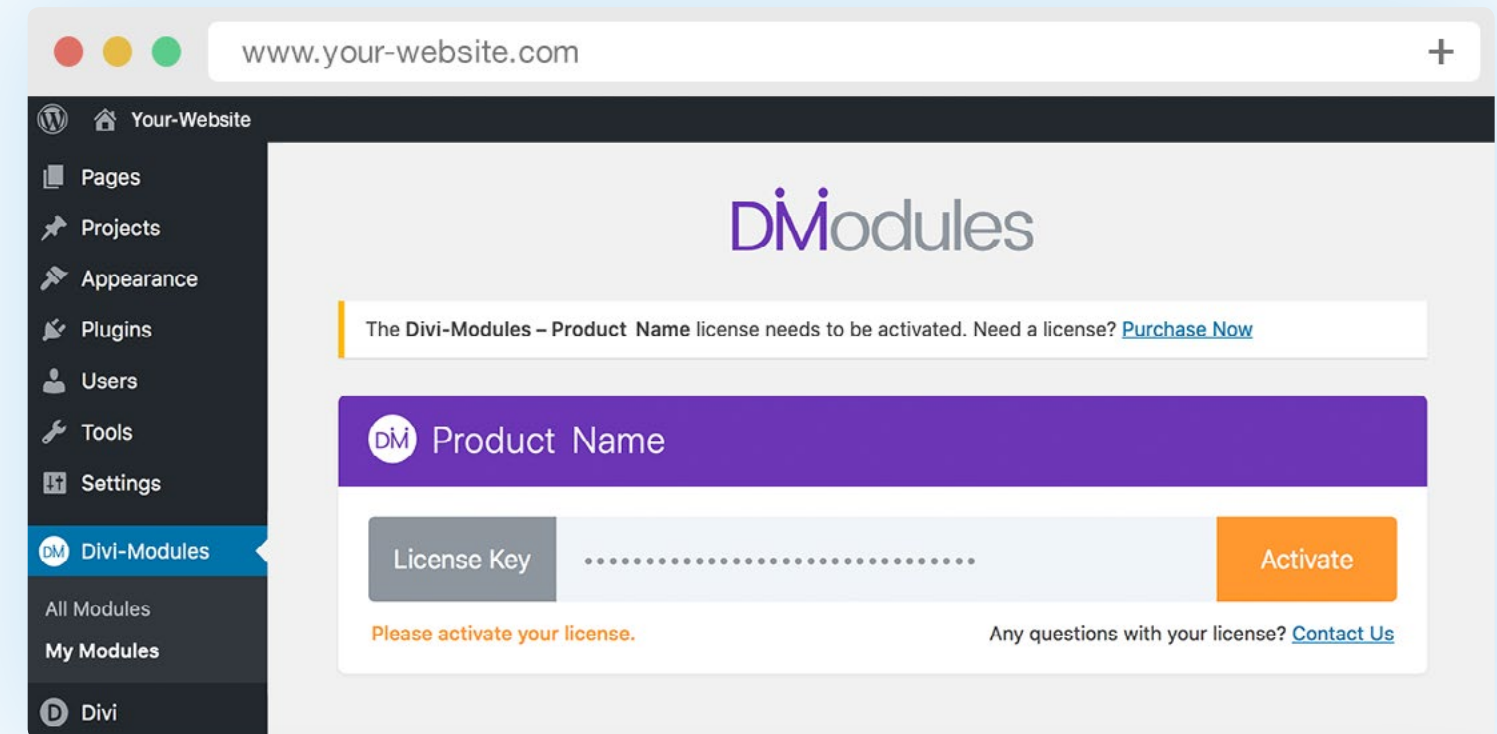

Software License

In order to receive periodic updates, you will need to activate your *Software License*. To do this, navigate to the *Divi-Modules* menu item in your *WordPress Dashboard*. Go to the *My Modules* submenu, enter your *Software License Key*, and click *Activate*.

To manage your *Software License*, please login to your *Divi-Modules Account* [Purchases](#) page.

If your *Divi-Modules* product was purchased from the *Elegant Themes Divi Marketplace*, your product license is with *Elegant Themes*, not *Divi-Modules*. For all product licensing, updates and support, see your [Divi Marketplace Customer Dashboard](#).

Divi-Modules – Hide & Show

Divi-Modules – Hide & Show lets you hide and show website content based on logged-in status, user role, date and time. Use it to hide content during website development or to show targeted content to specific users at specific times.

Settings

Divi-Modules – Hide & Show adds several new fields to the Visibility toggle of every Section, Row, Column, and Module element in the Divi Builder.

Hide & Show

Here you can choose to hide or show an element from the website front-end.

Hide From... / Show To...

Here you can choose to hide or show an element based on logged-in status or user role.

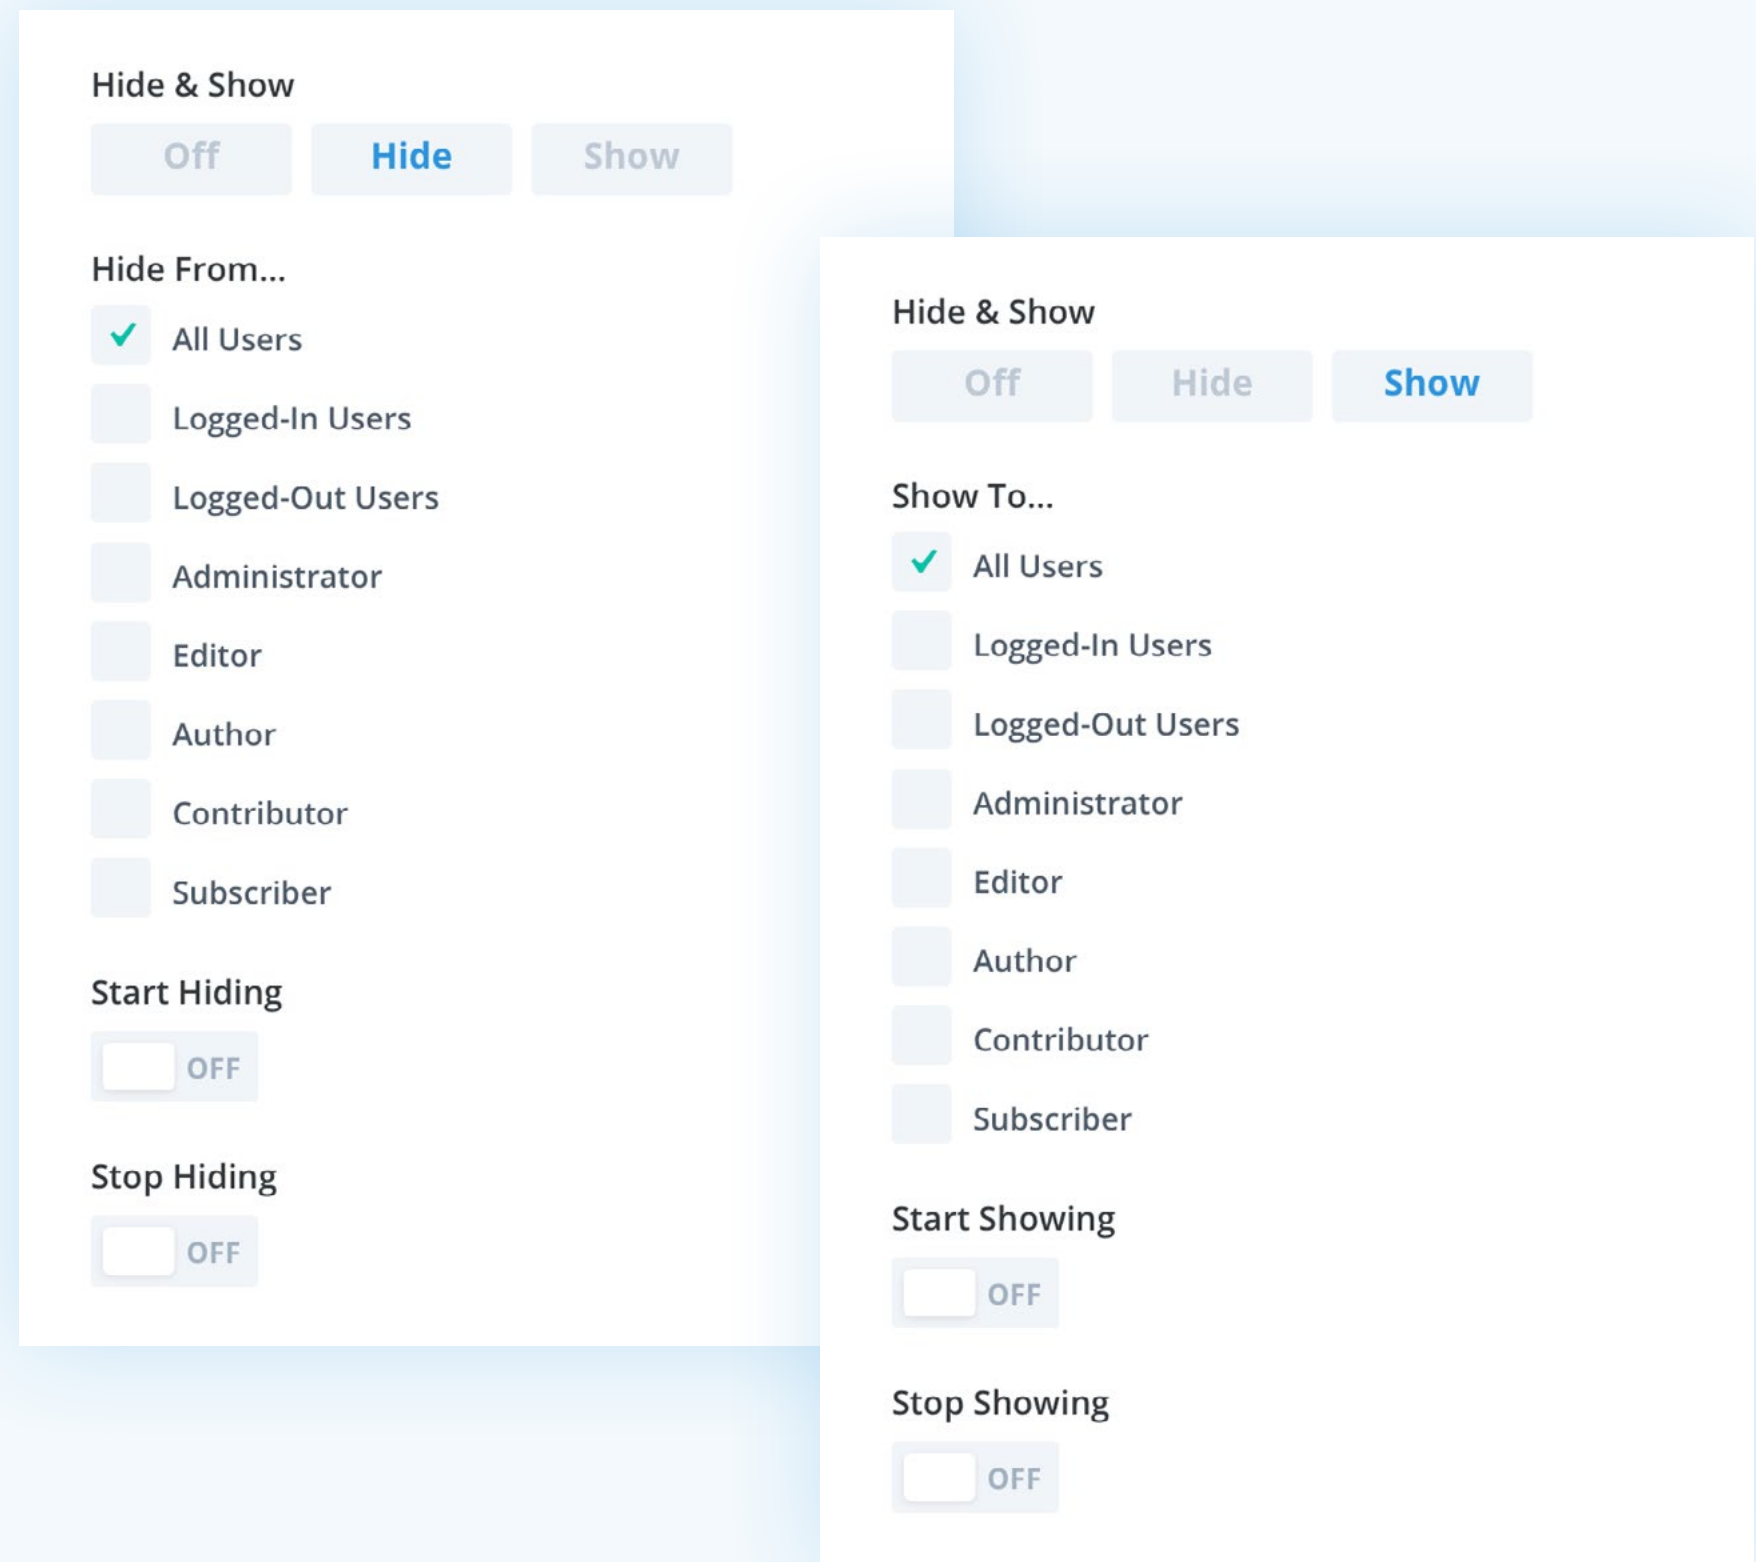

Note: If at any time you add or delete user roles in your Wordpress setup, you may need to reset the *Show To...* settings.

Start Hiding / Start Showing

Here you can choose to start hiding or showing this element on a particular date and time.

Stop Hiding / Stop Showing

Here you can choose to stop hiding or showing this element on a particular date and time.

Targeted Content

Use *Hide & Show* to control who sees your content. Create special offers, notifications, and other user specific content, then use the *Hide From...* setting to make the content invisible to specific users, such as Logged-Out Users.

Compatibility

Divi-Modules – Hide & Show is compatible with all standard Divi Builder modules, WooCommerce modules, and our own Divi-Modules products.

To add compatibility for additional third-party modules, go to the *Divi-Modules > My Modules > Hide & Show* settings panel in your *WordPress Admin* area. Here you can enter a comma separated list of unique slugs (classes) for the modules you wish to add.

To find the unique slug of the module you wish to add, first add an instance of the module to a page in your website. Then, inspect the module's HTML using your browser's developer tools. The unique slug (class) will appear directly after the `et_pb_module` class. In the example opposite, the unique slug is `dvmd_table_maker`.

Once you have found your module's unique slug, enter it into the *Add Module* field of the *Hide & Show* settings panel, as shown.

Note: If your copy of *Divi-Modules – Hide & Show* was purchased from the Elegant Themes Divi Marketplace, the *Add Module* field will not be available to you. To enable it, you will need install any product that has been purchased directly from divi-modules.com. The easiest way to do this is to download and install a FREE copy of our [Divi-Modules – Simple Heading](#).

```
